

NO VEIN?

NO TIME!

NO FEAR!

NO PAIN!

Establishing an IV line using peripheral veins is almost impossible in cardiac arrest, shock, multiple trauma, severe burn injuries and other emergencies. Without instant intravascular access, the patient could lose their life or suffer irreversible damage.

B.I.G. (Bone Injection Gun) - the world's first user-friendly intraosseous device - offers you instant intravascular access. The B.I.G. is a novel, automatic intraosseous infusion device that provides rapid, safe & easy intravascular access through the bone marrow.

B.I.G. is the effective alternative answer to unsuccessful intravenous access during emergencies, which dramatically increases the caregiver's ability to save lives.

Pediatric 18G

FDA approved
(adult & pediatric)

Adult 15G

BIG Bone Injection Gun

Leading Intraosseous Devices

WaisMed Ltd.

B.I.G ADVANTAGES

The B.I.G. completely eliminates delays in IV access for administering fluids/medications, and provides you with the perfect solution:

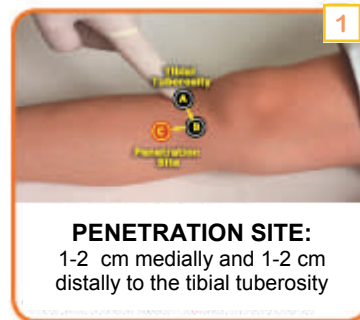

- Infusion established in less than 1 minute.
- User-friendly and relatively painless penetration.
- Suitable for blood transfusion.
- Rapid infusion of liquids and drugs.
- Extra Safe - no direct contact to the patient's blood.
- Can be used by Physicians, Nurses & Paramedics.

B.I.G PRIMARY ANATOMIC SITE

ADULT

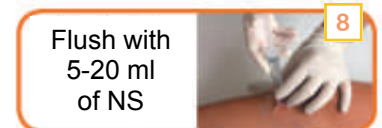

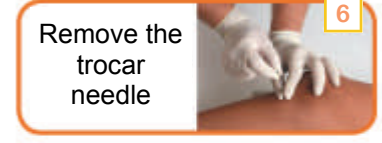

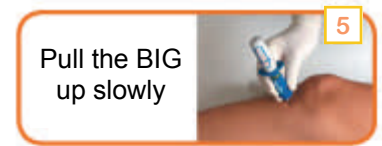

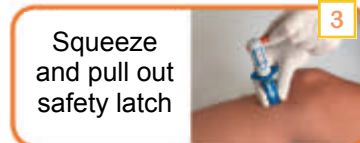

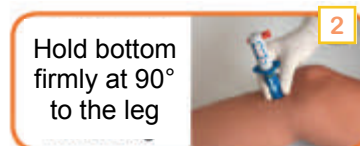

PEDIATRIC

Primary site for intraosseous infusion is the proximal tibia. For more anatomic sites, please see the user's leaflet.

B.I.G SIMPLE TO USE
